Jotter
Designed with collaboration in mind

Streamline your communication

Jotter is a brand new utility plug-in for making notes and comments, designed with collaboration in mind. Simply insert Jotter anywhere in your project, and add annotations locked to the timecode. These can be shared between collaborators either via the plug-in, or via an exported .csv file. Jotter can also be used as a standalone application in situations where a DAW is either unavailable or simply not required.
