Mailshot copy (short):

Paragon is a true convolution reverb with the flexibility and control of a classic algorithmic reverb, giving you the sound of real spaces, now with unprecedented tweakability. Paragon is also fully optimised for multichannel outputs, including Dolby Atmos beds.

Available October 21st for $599.

Mailshot copy (long):

Paragon is a plug-in that uses unique groundbreaking technology to combine the authentic sound of a convolution reverb with the flexibility of an algorithmic reverb. Via re-synthesis, Paragon offers full control of the decay, room size and brightness of reverbs modelled on 3D recordings of real spaces - with no time-stretching, which means no artefacts - not to mention spectral analysis and precise EQ of the Impulse Responses themselves. Perfect for surround applications including Dolby Atmos bed tracks, the reverb operates in up to 7.1.2 channels of audio.

Available October 21st for $599.
