NUGEN Audio have released Paragon 1.1.

Paragon is a true convolution reverb with the flexibility and control of an algorithmic reverb.

Paragon 1.1 includes 4 new impulse response models, including 3 outdoor models. This update also includes an improved preset browser and improved stereo balancing.

Paragon has been added to the NUGEN post bundle, available for \$1499. Current owners of the post bundle can get 50% off Paragon until March 17th.

Owners of Paragon 1.0 can upgrade for free.

NUGEN Audio have released Paragon 1.1.

Paragon is a true convolution reverb with the flexibility and control of an algorithmic reverb. Via re-synthesis, Paragon offers full control of the decay, room size and brightness of reverbs modelled on 3D recordings of real spaces - with no time-stretching, which means no artefacts.

Paragon 1.1 includes 4 new impulse response models, including 3 outdoor models. This will allow you to replicate the sound of real outdoor spaces from your studio. This update also includes an improved preset browser and improved stereo balancing.

Paragon has been added to the NUGEN post bundle, available for \$1499. Current owners of the post bundle can get 50% off Paragon until March 17th.

Owners of Paragon 1.0 can upgrade for free.
