

EMBARGOED UNTIL OCTOBER 21, 2020

NUGEN AUDIO RELEASES PARAGON

True Convolution Reverb With the Flexibility and Control of a Classic Algorithmic Reverb

LEEDS, UK, OCTOBER 21, 2020 – [NUGEN Audio](#) announces the latest addition to its software lineup – Paragon. A true convolution reverb unlike any other, Paragon offers full control of the decay, room size and brightness via state-of-the-art re-synthesis. It also provides an unprecedented level of tweakability, with zero time-stretching – which means no artifacts. Additionally, Paragon features spectral analysis and precise EQ of the impulse responses.

“The Paragon reverb software has been NUGEN’s best-kept secret, and we’re excited to now unveil it to the world,” says Paul Tapper, CEO, NUGEN Audio. “With Paragon, gone are the days of enormous IR libraries. This software not only enables users to reduce the sheer volume of recordings, it also encourages a greater level of creativity. We’re grateful to all of our developers and beta testers who helped make this possible and look forward to hearing feedback from the industry.”

Perfect for surround applications, including Dolby Atmos bed tracks, Paragon reverb operates in up to 7.1.2 channels of audio.

About NUGEN Audio:

The world’s top names in post-production, music and broadcast use NUGEN Audio’s award-winning loudness metering/correction, surround audio, mixing/mastering, tracking and audio analysis tools. For audio professionals, NUGEN Audio’s products offer market-leading fidelity and unrestricted creativity in every situation, providing a direct and intuitive way to work with sound. The company’s tools make it easier to deliver high-quality, compliant audio while saving time, reducing costs and preserving the creative process. For more information, visit www.nugenaudio.com.
