NUGEN Producer

Re-imagine your production workflow

Eight world class plug-ins, also available individually

Containing eight world class plug-ins, NUGEN Producer provides the essential mix and mastering tools you need to expand your production toolkit and create first class audio from start to finish. Including acclaimed audio analysis & play-out auditioning, panoramic enhancement & low frequency control, custom signal architecture and pristine limiting & EQ, NUGEN Producer is the perfect upgrade for professionals who need to optimize their productions.

ISLst

True Peak Limiter

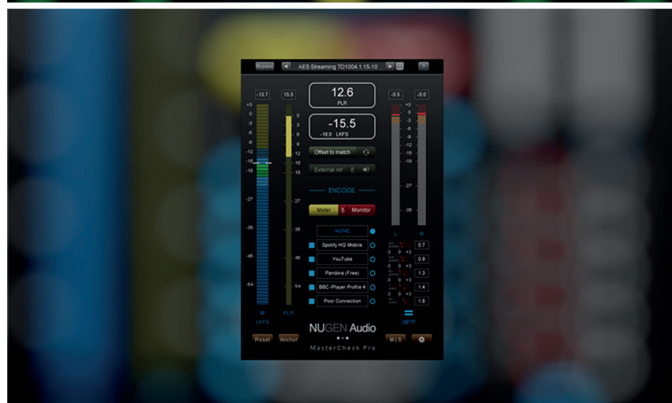

Pristine quality True Peak limiting with ease. ISLst transparently prepares your stereo content for online music services and eliminates codec distortion.

MasterCheck

Master for Streaming

Mix & master for today's digital music services. Hear how your tracks are affected by loudness matching and listen to different codecs in real time so you can perfectly tune your master to today's delivery formats.

Visualizer

Audio Analysis Suite

Indispensable audio analysis for quality audio production. A standardized reference set of professional tools managed via a unique, intelligent window system.

Monofilter

Low Frequency Manager

Sharpen, define, align and anchor your bass. Create solid or natural sounding bass to provide the foundation for real power and definition.

Stereoizer

Stereo Enhancer

A full range of stereo image enhancement, from gentle width adjustments to huge dynamic ambiences. Full mono compatibility and no unwanted artifacts.

Stereoplacer

21st Century Pan Control

Frequency specific stereo placement using unique stereo positioning technology. Precise control you just can't get with a traditional mix setup.

SEQ-ST

Unequaled Creative EQ

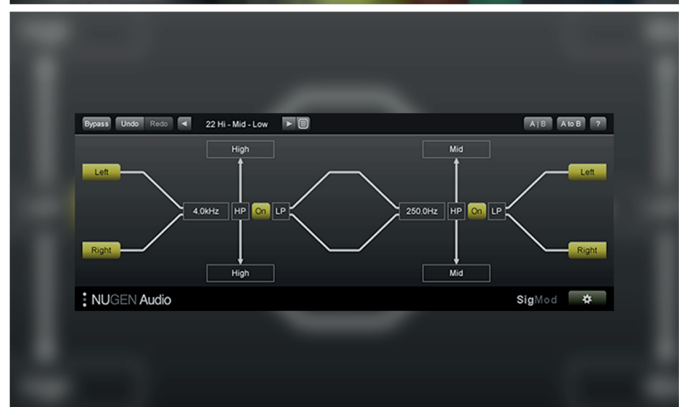

Powerful sonic sculpting and EQ matching. Linear phase technology delivers transparency without phase smearing and provides sharp transients. Filter morphing enables fluid creative effects and transitions.

SigMod

Custom Signal Architecture

Instantly enhance the functionality of your plug-ins and DAW with twelve different signal modification units.

Key features

- Powerful, standardized, brick-wall limiting
- Elegant playout delivery targeting and referencing
- Precise frequency specific placement and correction
- Customisable modular signal architecture
- Essential low frequency management
- Intuitive, professional audio analysis
- Exceptional stereo enhancement
- Linear-phase spline and match EQ
- VST and AU hosting
