VisLM 3

Loudness metering
without compromise.

If you have any questions about VisLM 3,
please email support@nugenaudio.com

VisLM 3 is a major update for NUGEN Audio's **industry standard** loudness meter, featuring the same tools you know and love for intuitive, reliable and accurate loudness measurement, plus **game-changing new features** to revolutionise your loudness workflow.

Old reliable

- **Timecode-locked** loudness history graph, measured and drawn as you work.
- **ReMEM** with loudness overdub, recalculating on the fly.
- Integrated, short-term and momentary loudness, LRA, dialog LRA and True Peak measurement.
- All common international loudness standards for **streaming, TV and film**.

New innovations

- User-defined **programme segments** for projects which require multiple integrated measurements (e.g. between ad breaks).
- **Stem-monitoring** and loudness measurement for separate deliverables.
- **Timestamped** notes, comments and annotations using the same technology as NUGEN Audio's **Jotter** plug-in.
- Supports up to **22.2 channels**.
- **Downloadable presets** - stay abreast of changing loudness standards without waiting for a point release update.

There is no faster, smarter way to manage loudness.
